Lab Test 2

```
class Book <a, b, c> {
    a Name;
    b author;
    c number;
    Book (a a1, b b1, c c1) {
        This.Name = a1;
        this.author = b1;
        this.number = c1;
    }
    public void display () {
        System.out.println ("The name of Book : " + this.Name +
        " The author of The book is : " + this.author + " The number of
        pages : " + This.number);
    }
}

class Generic Test {
    public static void main (String Args[]) {
        Book <String, String, Integer> bb1 = new Book <
        String, String, Integer> ("Alchemist", "Paulo cohel", 200);
        ob1. display();
        Book <String, String, Integer> ob2 = new Book < "Atler",
        "christian Reed", 300);
        ob2. display();
        Book <String, String, Integer> ob3 = new Book < "Random",
        "John aleen", 300);
    }
}
```
